

Green Buildings, Not Greenhouse Gases

50%

of Boston's greenhouse gas
emissions come from just

3%

of Boston's buildings.

It's time to clean up these dirty buildings.

We urge the City of Boston to implement strong requirements for big buildings to stop wasting energy and reduce carbon emissions that contribute to sea level rise and hotter days.

Cleaning up dirty buildings means:

MORE LOCAL JOBS

Energy efficiency work creates good local jobs and boosts the economy for our community.

CLEANER AIR

Reducing power usage and cutting the fossil fuels burned means less air pollution in our city.

REDUCED EMISSIONS

To meet our climate goals we have to tackle the largest source of emissions as quickly as possible.
